

Karona announces MDF Door Design Change!

Karona has made a design improvement in our MDF Door. You and your customer will not see any difference in the appearance of the door. Engineering has developed a new way of applying the solid wood edgeband to the door.

Positives:

- Higher quality
- No Opportunity for Delamination
- Maintain/control cost as the price of raw material has increased

This is a seamless change for you. All orders entered in our system with MDF selected as the species will be manufactured with the new design.

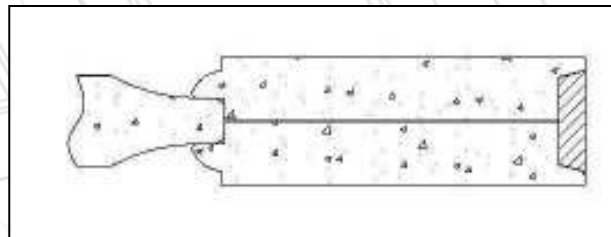

We will still offer the original style edgeband for an upcharge and you will be able to use the Karona on-line quote tool to price both.

If you pick "MDF" for the species you will receive the new improved design.

If you pick "MDFOD" for the species you will be up-charged for the original design.

We are confident that you will like the benefits of the new design. Contact Customer Service with any questions.

New Design Cross Section

**This change is effective Friday
September 7, 2012 on all quotes and
orders.**
